

CRC SCORE CALCULATION POLICY

Adopted: September 30, 2015

Effective: Fall 2016 semester

1. PREAMBLE

The CRC (*Cote de rendement au Collegial*) or R-score is a calculation of grades generally used by Quebec Universities during admission process for selection of candidates to programs with limited enrollment. The CRC calculation per course takes into account the student's grade, the group average and the group strength (based on high school grades of students in the group).

According to the Bureau de Coopération Interuniversitaire (BCI), for purposes of calculating the CRC, an evaluation group includes "*students of the same college who have taken the same course, the same year, the same semester and who have been evaluated in the same way.*" BCI: R-Score-FAQ-March2013

2. POLICY

The Academic Dean will ensure the establishment of an institutional procedure for CRC groupings and its implementation.
